

Medication Log

It is important to take medications exactly as the doctor has prescribed them. This medication log will help you track medications given and provides you a place to note any side effects or other comments so you can share with your physician if needed.

If the patient misses a dose or experiences any side effects from taking the medication as prescribed, contact the prescribing physician for further instructions. Also, make sure to tell the healthcare team about any supplements, vitamins, or over-the-counter medications the patient takes.
